JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– gallium arsenide 22, 51, 324
– gallium indium phosphide 1
– magnesium alloy 209
– nitride 11
– organic 1
Ammonium
– nitrate 404
Apparatus
– for miscellaneous purposes
– – graphite boat design in liquid phase epitaxy 376
– – in situ scanning force microscopy 291
– – luminescent devices, grown by electron beam evaporation 165
– – stereo imaging of solid–melt interface 455
Arsenic
– organic 347

Barium
– borate, β 393
Bismuth
– germanate 371
– silicate 371
– strontium calcium cuprate 131, 479
Burton–Prim–Slichter theory
– for distribution coefficient
– – in (cubic) zirconia 159

Cadmium
– magnesium telluride 93
– mercury telluride 352
– selenide 68, 75
– sulphide 68, 75, 437
– telluride 81, 93
Carbon 304
Characterization
– by cracks
– – of epitaxial overlayers 239
– by electron microscopy
– – of solid fats 200
– by liquid permeation
– – of solid fats 200
– by photoluminescence
– – of aluminum gallium arsenide multi-quantum-well lasers 22
– by physical methods
– – of lysozyme solutions 183
– by scanning force microscopy
– – of L-ascorbic acid 291
– – of lithium fluoride 291
– by second harmonic generation
– – of organic nonlinear optical material 389
– by X-ray diffraction
– – of strain state of GeSi/Si 103
Computer simulation
– of horizontal Bridgman solidification 279
– of morphology of molecular crystals 443
– of organic (tubes) by floating zone 265
Constitutional supercooling
– of cadmium telluride 81
– of germanium–silicon alloy 219
Convection 209, 265, 279

Device characterization
– diodes 29
– electronic materials 81, 93, 315
– lasers 299
– optoelectronic materials 29, 389, 393, 425
– quantum wells 22, 37, 51, 299
Diffusional control
– of cadmium telluride 81
Diodes, see Device characterization
Dislocations
– in epitaxial overlayers 239
Dissolution
– of lysozyme 183

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 29, 57, 234, 343, 357, 476
Eutectic growth
– of silicon–gold 357

Fats
– solid 200

Gallium
– antimonide 44, 476

– arsenide 1, 29, 51, 249, 315, 324, 331, 343, 347
– nitride 11
Germanium
– silicon 103, 109, 219, 363

Heat flow control
– in Czochralski grown lithium tantalate 383
L-Histidine 193
Hydrodynamics, see Convection

Indium
– gallium arsenide 37
– gallium arsenide phosphide 299
– phosphide 57
– phosphide antimonide 310

Kinetics
– of doping in silicon epitaxy 98
– of growth 193, 219, 419, 425, 465, 476
– of interface control 209, 473

Lasers, see Device characterization
Lasers, crystals for
– aluminum gallium arsenide 22
– lead selenide telluride 376
Lead
– bromide 455
– cuprate 124
– selenide telluride 376
Lithium
– gallium 399
– tantalate 383
Lysozyme 183, 419

Melt growth technique
– by Bridgman–Stockbarger method
– – of aluminum–magnesium alloy 209
– – of gallium antimonide 44, 476
– – of gallium arsenide 29
– – of lead bromide 455
– – of lithium–gallium 399
– – theory of 279
– by Czochralski method
– – of bismuth germanates 371
– – of bismuth silicates 371
– – of lithium tantalate 383
– – of silicon–germanium 473
– – of strontium barium niobate 178
– – theory of meniscus height 484
– – theory of segregation 249
– by floating zone method
– – theory of 256, 265
– by pulling with a gold wire
– – of bismuth strontium cuprate 175
– by skull melting
– – of (cubic) zirconia 159
– by uniaxial solidification
– – of germanium–silicon alloy 219
– – theory of 219
– by zone melting
– – of gallium arsenide 343
Mercury
– cadmium telluride 352
– (II) iodide 465
Microgravity, growth under
– of mercury (II) iodide 465
Morphological stability
– of cadmium sulphide in polymer matrix 437
– of germanium–silicon alloy 219
– of L-histidine 193

Naphthalene
– biphenyl 443
Nonlinear optics, crystals for
– barium borate, β 393
– organic crystals 389, 425
Nucleation
– of dislocations in germanium–silicon 363
– of L-histidine 193
Numbers
– Grashof 279
– Marangoni 279
– Prandtl 265, 279
– Rayleigh 209
– Schmidt 279

Optoelectronic materials, see Device characterization
Organic crystals 256, 443
– nonlinear optical material 289, 425
– superconductors 119

Phase diagrams
– of ammonium nitrate 404
– of copper oxide/bismuth strontium oxide 175
– of etchant for indium phosphide 57
– of silicon–gold 357
– of yttrium oxide/copper oxide 153
Precursor
– for doping in gallium arsenide 347
Purification of materials
– of lysozyme 183

Quantum wells, see Device characterization

Semiconductor melts 451
Silicon 98, 265
– germanium 473
Sodium
– nitrate 265
Solid growth technique
– by polymorphic transformation
– – of ammonium nitrate 404
– – of fats, solid 200
– – of L-histidine 193

Solution growth technique
– by electrocrystallization
– – of organic superconductor 119
– by flux method
– – of barium borate, β 393
– – of lead cuprate, superconductor 124
– – of L-histidine 193
– – of yttrium cuprate 150, 153
– by low temperature method
– – of cadmium sulphide in presence of polymer 437
– – of lysozyme 419
– – of organic crystals 389, 425
– theory of 443
Stefan problem or moving boundary problem
– of (cubic) zirconium 159
Strontium
– barium niobate 178
– sulphide 165
– titanate 141
Superconductivity materials, high T_c
– bulk
– – of lead strontium (yttrium calcium) cuprate 124
– film
– – of BSCCO 479
– – of YBCO 141
– whisker
– – of BSCCO 131
Superconductivity materials, low T_c
– bulk
– – of organic crystals 119
Superlattices, multilayers
– of superconductor 141
– of III–V compounds 51
Surface energy, determination
– of naphthalene biphenyl 443
– of semiconductor melts 451
Surface morphology
– of gallium antimonide 476
Surface structure
– of carbon microtubule 304
– of naphthalene biphenyl 443

Tellurium
– dioxide 371
Thin film growth, epitaxy
– by chemical beam epitaxy
– – of gallium arsenide 347
– by electron beam epitaxy
– – of strontium sulphide 165
– by hot wall epitaxy
– – of cadmium selenide 68, 75
– – of cadmium sulphide 68, 75
– by liquid phase epitaxy
– – of gallium arsenide 315
– – of germanium–silicon 363
– – of lead selenide telluride 376
– – of mercury cadmium telluride 352
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide phosphide 299
– by molecular beam epitaxy
– – of aluminum gallium arsenide 51
– – of aluminum nitride 11
– – of cadmium magnesium telluride 93
– – of cadmium telluride 93
– – of gallium arsenide 51, 315, 331
– – of gallium nitride 11
– – of germanium–silicon alloy 109
– – of indium gallium arsenide 37
– – of organic crystals 256
– – of zinc selenide 89
– by pulsed layer deposition
– – of yttrium barium cuprate 141
– by sputtering
– – of bismuth strontium calcium cuprate 479
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon 98
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 22, 324
– – – of aluminum gallium indium phosphide 1
– – – of gallium arsenide 1, 324
– – – of indium phosphide antimonide 310
Twinning
– of zinc oxide 234

Vapor growth technique
– by chemical transport
– – of zinc oxide 234
– by evaporation and condensation
– – of cadmium telluride 81
– – of carbon fiber 304
– – of mercury (II) iodide 465
Vapor–liquid–solid growth
– of silicon 357

Whisker growth
– of bismuth strontium calcium cuprate 131
– of carbon fiber 304
– of silicon 357
– of zinc oxide 234

Yttrium
– cuprate 150, 153

Zinc
– oxide 204
– selenide 89
Zirconia (cubic) 159
Zirconium
– dioxide 159
